**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14 and 36, drawn to a method and apparatus comprising a control unit for regulating the transmission rate based on the acknowledged packet which notifies the transmitter that the receiver received the transmitted packet, classified in class 370, subclass 235.
  - II. Claims 15-27 and 37, drawn to a method and apparatus comprising a control unit for regulating the transmission rate based on a returned control packet which is generated by the transmitter wherein the control packet is generated by the transmitter and inserted into the transmission stream, classified in class 370, subclass 236.
  - III. Claims 28-34 and 37-38, drawn to a method and apparatus comprising a control unit for regulating the transmission rate based on a returned acknowledgement marked packet where in the transmitter is selectively marked certain packets of the aggregate traffic streams, classified in class 370, subclass 252.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as regulating the transmission rate based on the acknowledged packet which notifies the transmitter that the receiver received the transmitted packet; invention II has separate utility such as regulating the

Art Unit: 2665

transmission rate based on a returned control packet which is generated by the transmitter wherein the control packet is generated by the transmitter and inserted into the transmission stream; invention III has separate utility such as regulating the transmission rate based on a returned acknowledgement marked packet where in the transmitter is selectively marked certain packets of the aggregate traffic streams. See MPEP § 806.05(d).

3. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, Group I has separate utility such as regulating the transmission rate based on the acknowledged packet which notifies the transmitter that the receiver received the transmitted packet; Group II has separate utility such as regulating the transmission rate based on a returned control packet which is generated by the transmitter wherein the control packet is generated by the transmitter and inserted into the transmission stream; Group III has separate utility such as regulating the transmission rate based on a returned acknowledgement marked packet where in the transmitter is selectively marked certain packets of the aggregate traffic streams

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, restriction for examination purposes as indicated is proper.

Art Unit: 2665

6. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

8. A telephone call was made to Mr. Ralph Dowell on 1/8/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
